The 9712P provides for electric or manual locking / unlocking of swinging doors. It can be operated from a remote location or by key at the door. For additional security, it is recommended that the 9712P lock be used with an Airteq high security door position sensor. An automatic door closer may also be used.

STANDARD OPERATION
- Latch bolt retracts when momentary signal is applied to the lock and remains retracted until the door is opened approximately 2", at which time the latchbolt extends. The lock automatically latches & dead locks when the door is closed. (Mechanical Latchback)
- Provides automatic deadlocking, even in the event of a total loss of power
- Paracentric key cylinder to allow for manual mechanical unlocking of the lock by key at the opening
- Fails secure, unlocks when energized.
